LanLicenser 4.1

What's New in LanLicenser?

LanLicenser 4.1 builds on the success of earlier versions by introducing fundamental technology improvements that further increases its competitive edge.

Hardware Inventory support

LanLicenser now provides an integrated inventory and software metering solution. LanLicenser now includes a hardware inventory component (in addition to software inventory) which incorporates a powerful scanning component that gathers in-depth hardware information for all your Microsoft Windows© Workstations and Servers. In addition to gathering CPU, memory, disk drive and many other hardware details, it also detects any hardware that has been changed or removed using our proprietary change-tracking mechanism.

Improved 64-bit integration

As well as offering enhanced User Interface stability for Microsoft Windows 64-bit operating systems, LanLicenser 4.1 now monitors any and all 64-bit applications that are executed on your Client workstations.

Full SQL Server 2008 Support

LanLicenser 4.1 now fully integrates with Microsoft's latest industry standard database server. Both the LanLicenser main Site and Software Metering servers can now be installed to all versions of SQL Server 2008, including SQL Server 2008 Express edition.
Other version supported include...

Compatible with Windows 7

The LanLicenser 4.1 Client agent has passed all Microsoft-designed tests for compatibility and reliability on Windows 7.

Supports Virtual environments

LanLicenser can run on virtual server environments such as VMWare, MS Virtual PC and MS Virtual Server. Existing utilities available such as VMWare cloning can be used to clone the LanLicenser environment (Site Server, Software Metering Server and client) onto VMWare virtual machines.

Improved Report Wizard including new reports

Improvements have been made to the report wizard to increase its speed and efficiency, as well as allowing for a more flexible date range selection. LanLicenser now provides over 80 reports, including reports for hardware inventory and licence compliance status.

Product License Compliance

Products installed for the period 13/04/2010 14:45:00 to 20/04/2010 14:45:00

Product	Licenses	Computers		Users	Peak	License Type	Status	Difference

Shortcut Hiding

LanLicenser now offers the functionality to hide all shortcuts (using our fully configurable user, group and computer restrictions) in order to prevent restricted applications from even being displayed via shortcuts to the end-user.

Enhanced Offline restrictions

LanLicenser 4.1 now offers the ability to restrict applications from running if the Client is disconnected from the main Site Server.

Updated Software Identification database

LanLicenser's proprietary Software Identification Database has been updated to ensure a smoother product registration process and a better end-user experience.

Enhanced Inactivity Monitoring

Inactivity monitoring is now fully functional across multiple Windows sessions, improving on LanLicenser's already in-depth inactivity detection.

Increased Stability & Performance

LanLicenser 4.1 now offers a more robust end user experience with numerous bug fixes and performance improvements. The MMC user interface has been tuned to increase stability and minor improvements to the Report Wizard have increased its speed and efficiency. Database efficiency has also been improved.

More information on the LanLicenser Metering and inventory capabilities can be found within the following brochures:
